

GLOBALSOLUTIONS partner program

Deliver differentiation faster

Faster ramps

Speed time-to-revenue and reduce costs and risks using the seamless combination of GF and GLOBALSOLUTIONS resources.

>50 partners

Leverage validated, best-in-class solutions from GF and more than 50 partners to differentiate hardware.

The development of today's complex integrated circuits (ICs) requires much more than advanced process technologies. State-of-the-art, comprehensive design enablement is crucial, from electronic design automation (EDA) software tools, design intellectual property (IP) and design services to mask services and assembly solutions.

GLOBALFOUNDRIES® (GF®) provides specialty semiconductor solutions optimized to meet the unique demands of applications across automotive, mobility, computing, consumer IoT, industrial and wired connectivity markets and more. This portfolio is complemented by our ongoing focus on execution excellence and our commitment to deep collaboration with customers and partners to deliver the end-to-end design enablement resources critical to bringing differentiated products to market faster, while minimizing risks and costs.

The GLOBALSOLUTIONS® ecosystem, comprised of more than 50 partners with solutions spanning critical IC design areas, exemplifies this collaboration. Our design enablement team validates GLOBALSOLUTIONS® partner offerings with GF silicon solutions to ensure that the offerings meet the highest standards so that customers can achieve first-time-right silicon.

Innovate with confidence

The GLOBALSOLUTIONS ecosystem offers design enablement, IP, advanced assembly, mask and turnkey solutions that have already been validated on differentiated GF FinFET, FDX™, SOI, silicon photonics, SiGe and CMOS platforms to help customers avoid design pitfalls and deliver hardware that sets them apart from their competitors.

Optimize your design for growth markets

Our GLOBALSOLUTIONS program provides access to application-aligned assets from GF and 50+ partners to help designers get first-time-right results. It includes specialized FDXcelerator™ and RFwave™ programs that ease the move to FDX platforms and simplify RF design, respectively.

Fast track ROI

The GLOBALSOLUTIONS ecosystem nurtures the synergy and collaboration between customers, partners and GF to help reduce design and development barriers so that customers can accelerate time to market, volume and revenue, while helping partners gain market visibility, exposure and penetration.

Get a head start on the competition

GLOBALFOUNDRIES' expert design enablement team validates partners' services and solutions with proven GF silicon process technologies so designers can reduce development time with confidence that the highest standards have been met, while partners can take advantage of our team's technical expertise and get early insights into GF solution roadmaps.
